Summary

Symptom

Intrastat declarations for Bulgaria

Other terms

EU enlargement, Intrastat, Bulgaria

Reason and Prerequisites

Intrastat declarations must be created in Bulgaria since EU accession

Solution

This Note describes the solution of the Intrastat report for Bulgaria. For purposes of creation Bulgarian Intrastat report special transaction was created: /BGLOCS/SM.

In Step 1 data relevant for report is created.

In selection menu you can choose between data collection for Receipt (copy of transaction MEIS) or for Dispatch (copy of transaction VE01). In Step 2 there is for the moment possibility either creation of print form or electronic format output.

The Intrastat functionality is delivered via SAP CORE CEE add-on (see note 574080 and related ones).

Transaction VEFU enables you to maintain data or add new documents manually. For maintaining all necessary IMG activities choose standard path: IMG => Sales and distribution => Foreign trade => Periodic declarations.

The Intrastat data incompleteness check settings (transaction VEB1) can be initially set with the /BGLOCS/SD_INIT report run (via transaction se38) - data are copied from the 'DE' settings and afterwards can be modified. (please check also OSS note 731366)
